CB23F35: Low-Code Application Development using Zoho Creator

Assignment – 4

Name: Devadharshini G

Register No.: 240701108

AIM:

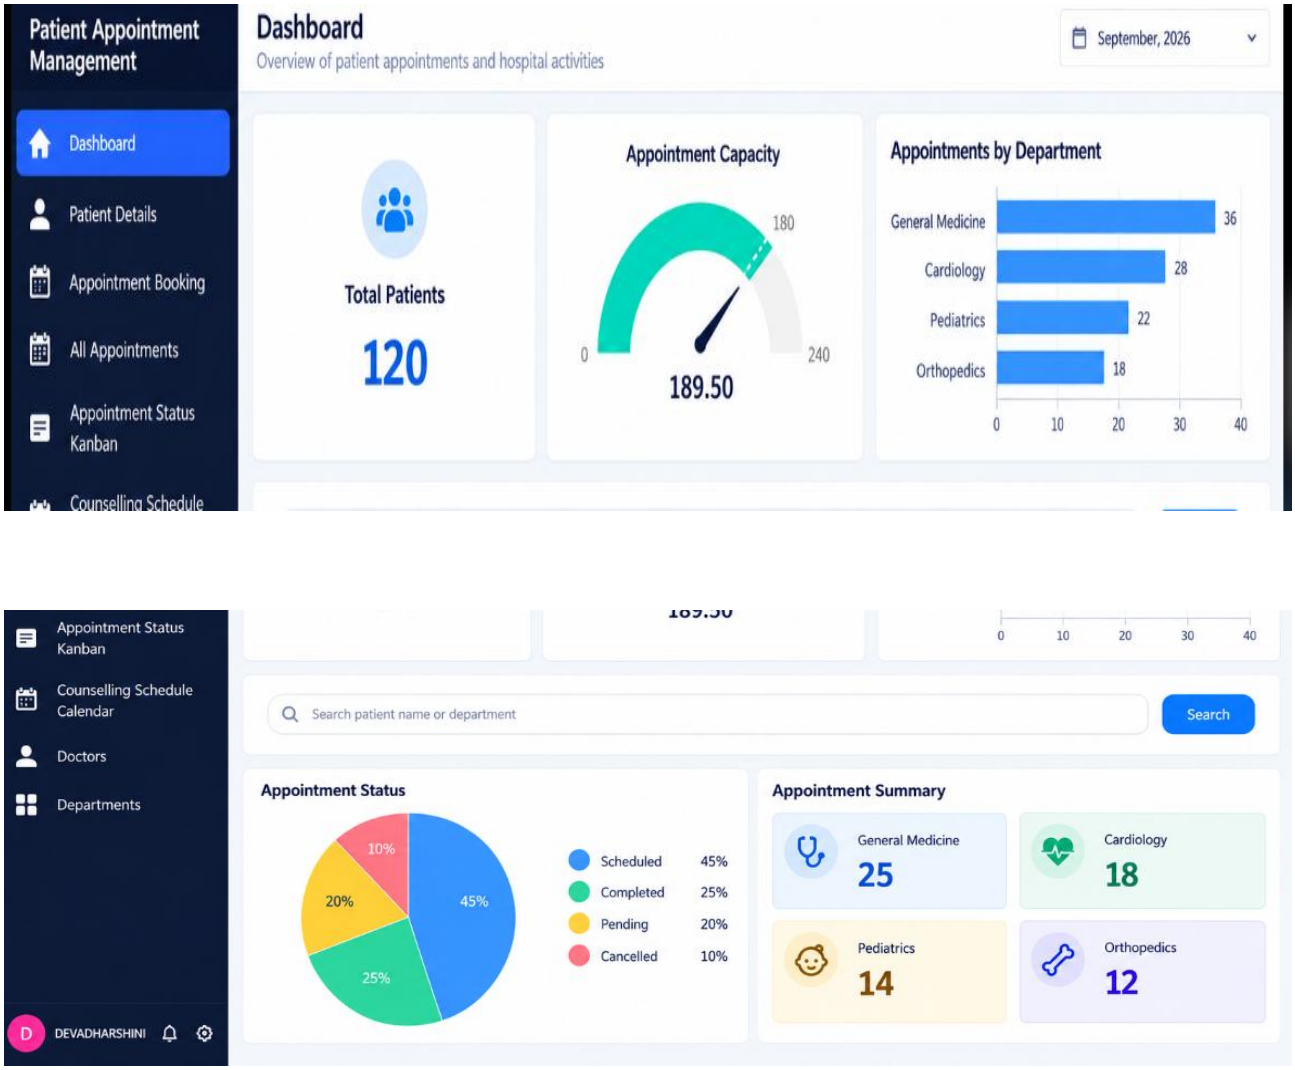

To design and build a single internal Command Center Page in Zoho Creator for the existing Patient Appointment Booking application by using all eleven Page Builder elements—Panel, Board, Chart, Gauge, Search, Form, Report, Snippets, Button, Widgets, and Viewer—to provide a unified workspace for monitoring, managing, and acting on patient appointment data.

PROCEDURE:

1. Open the existing "Patient Appointment & Scheduling Management" application in Zoho Creator and create a page named "Clinic_Command_Center_Page".
2. Add a Panel named "Command_Center_Main_Panel" as the outer layout container to organize all the page elements.
3. Add the Gauge element "Daily_Patient_Target_Gauge" to show the day's patient count against the clinic's daily capacity, and configure the capacity and gauge indicators.
4. Add the Chart element "Department_Load_Chart_Widget" to display appointment counts by department as a bar chart, with automatic refresh enabled.
5. Add the Search element "Patient_Search_Bar" at the top of the page to search appointments by patient name, contact number, or appointment ID.
6. Add the Board element "Appointment_Status_Board" with columns for Requested, Confirmed, Checked-In, Consulted, and Cancelled. Configure card movement to update the appointment status.
7. Add the Button element "Send_Appointment_Reminder_Button" near the board and configure it to send reminders only to patients whose preferred appointment date is today.
8. Embed the "Appointment_Booking_Form" using the Form element named "Quick_Walkin_Appointment_Form" so front-desk staff can register walk-in patients directly from the page.
9. Embed the "Appointment_Booking_Report" using the Report element named "Full_Appointments_Report" below the board, and restrict Excel export to clinic-administrator-level accounts.
10. Add the Snippets element "Clinic_Guidelines_Snippet" in the sidebar to display reusable clinic guidelines and pre-consultation instructions.
11. Add the Viewer element "Medical_Report_Viewer" below the guidelines snippet to open a patient's latest uploaded medical or laboratory report within the page.
12. Add the Widgets element "DoctorAvailability_And_Queue_Widgets" at the bottom of the page to show doctor availability and current waiting-queue status.

13. Arrange the elements into the Overview Strip, Processing Workspace, Detailed Data, Reference & Quick Actions sidebar, and Operations Strip as specified in the assignment.
14. Configure role-based page access for front-desk and clinical staff, verify that the form uses the same validation rules as the original appointment form, and test search, reminders, status-board updates, report viewing, and widgets using sample data.

OUTPUT:

RESULT:

Thus, the Clinic Command Center Page was designed in Zoho Creator using all eleven Page Builder elements. It brings appointment monitoring, patient search, status tracking, walk-in registration, appointment reporting, clinic guidelines, medical-report viewing, reminders, and doctor/queue information into one workspace, helping front-desk staff and doctors manage the patient visit lifecycle more efficiently.
